THE 9 SYSTEM

Using the 9 System blocks

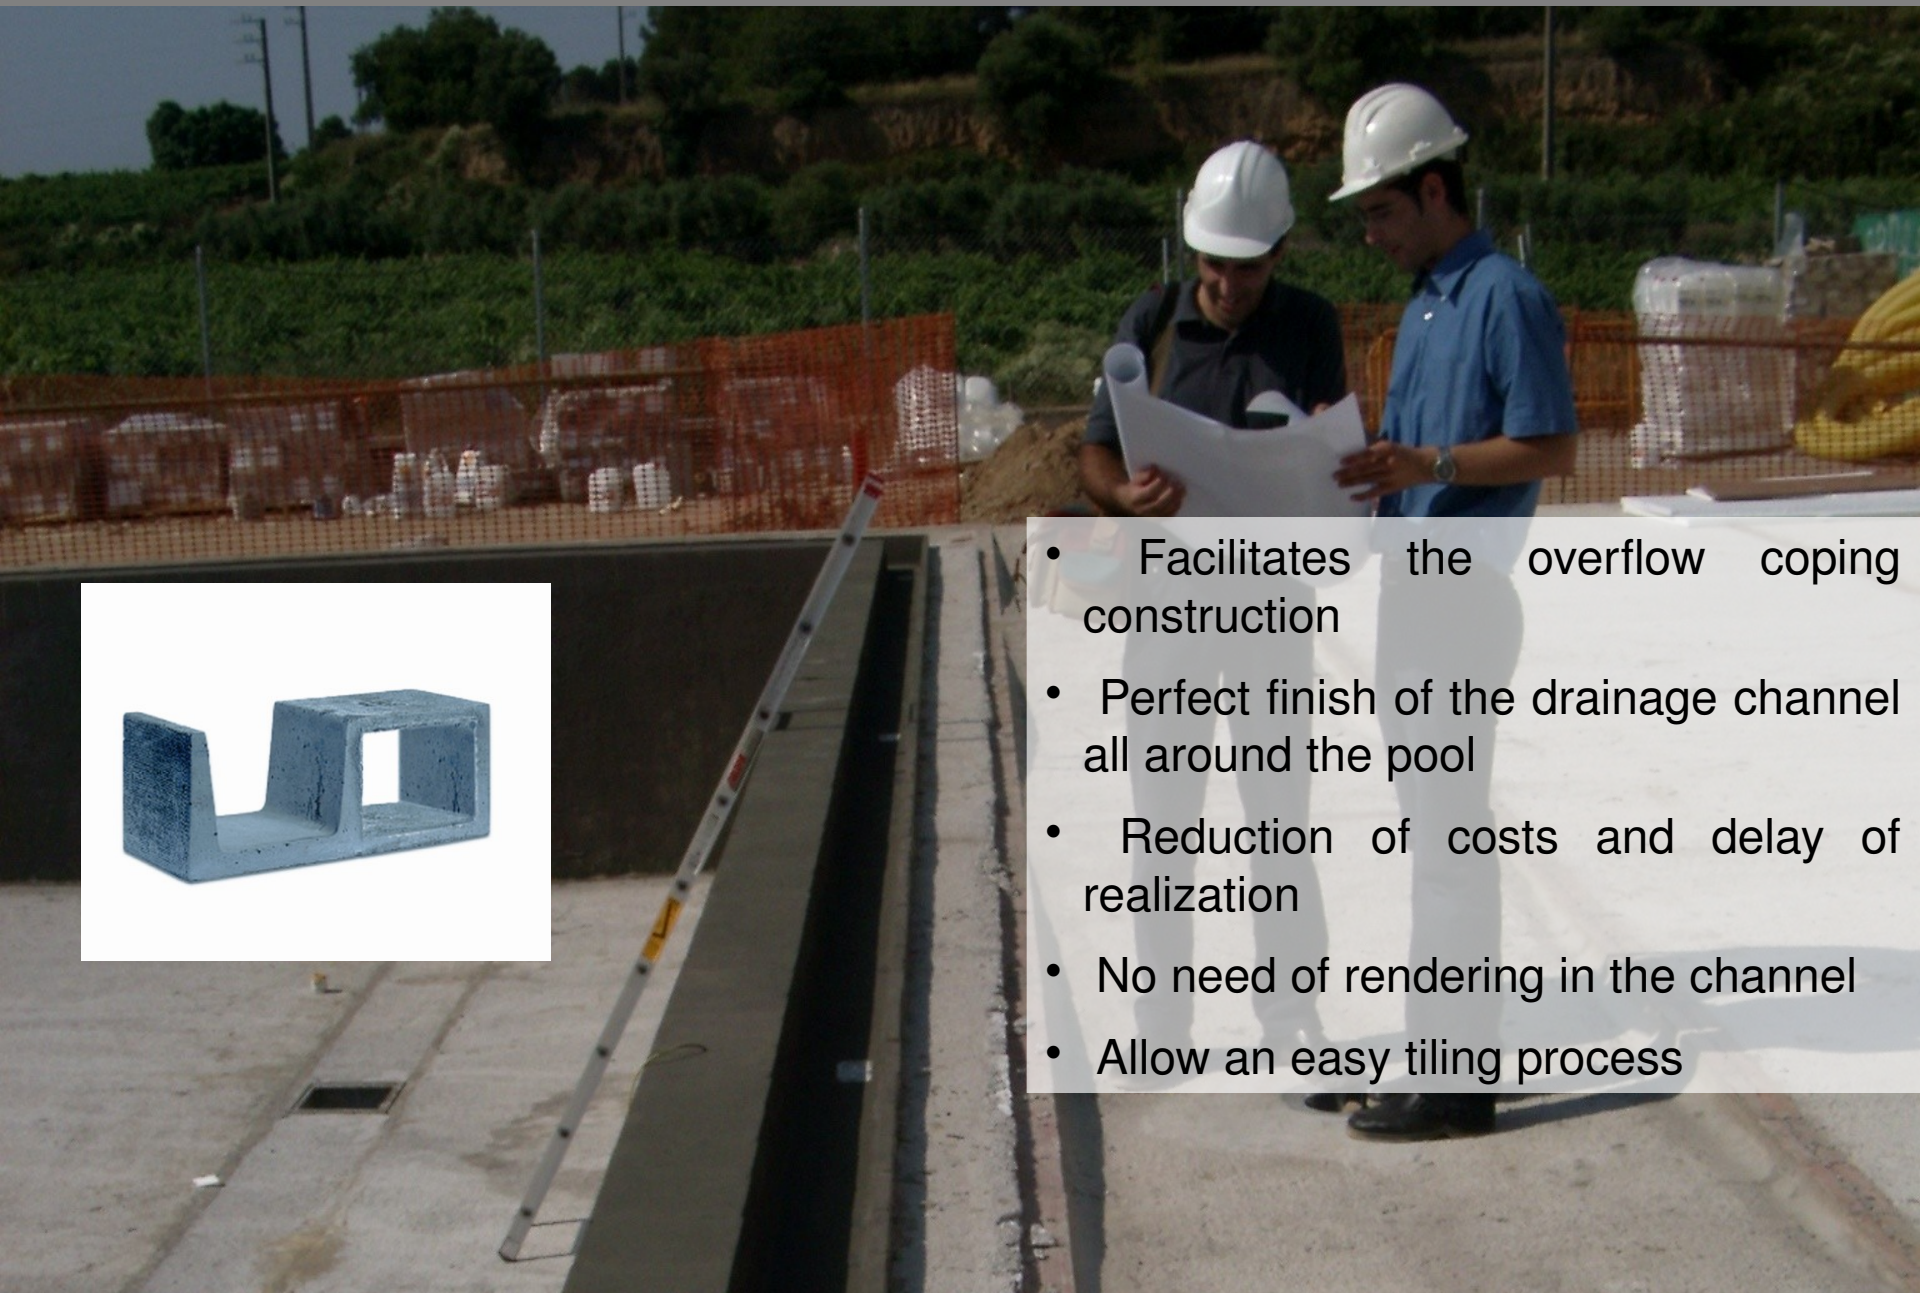

Without the 9 System blocks

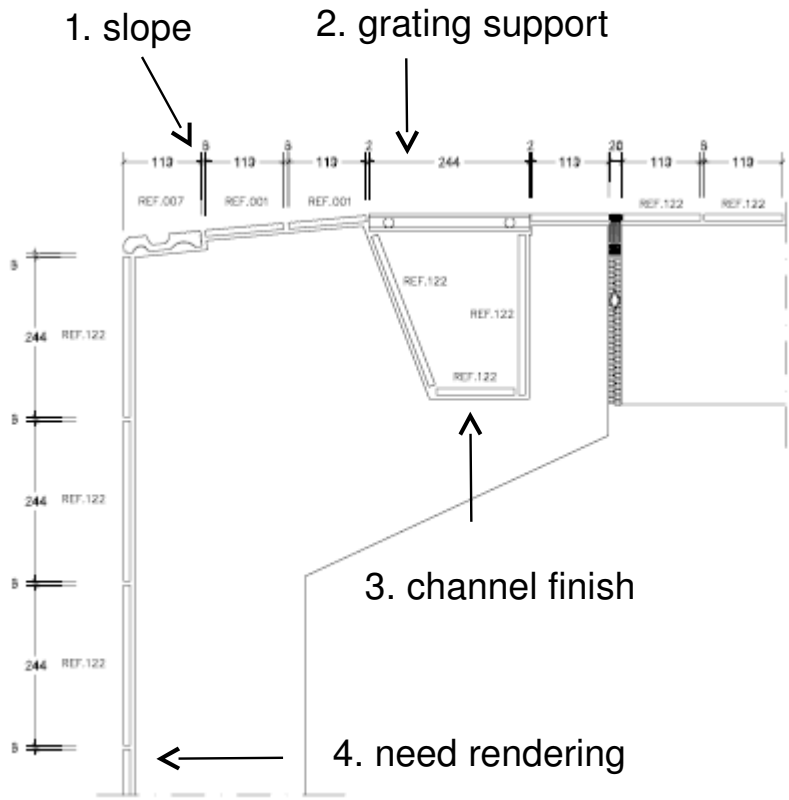

The 9 System provides a prefabricated border that significantly reduces the cost of building the cement overflow channel and enormously eases the construction of the overflowing pool. It ensures both a perfect finish and flow. The system involves a prefabricated border that consists of a set of blocks made of water-repellent cement, designed to function as a channel and a support for ceramic tile at the same time.

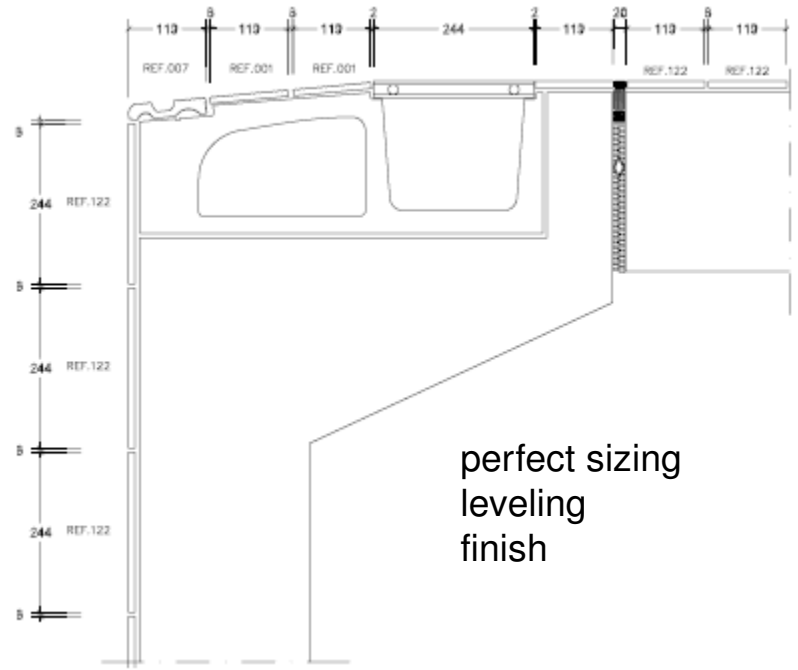

THE 9 SYSTEM: Reduces constructions cost and speeds up instalation precesses

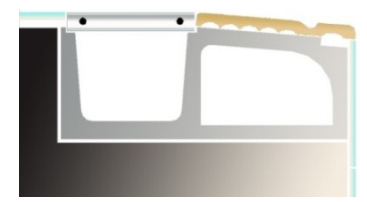

- Facilitates the overflow coping construction
- Perfect finish of the drainage channel all around the pool
- Reduction of costs and delay of realization
- No need of rendering in the channel
- Allow an easy tiling process

without S9

with S9

☑ LAYING THE S-9 BLOCKS

1

☑ First lay the blocks in the corners, the float line anchors and the steps.

2

☑ A line level is needed.

3

☑ Apply the adhesive material to the side of the S-9 block.

4

☑ Lay the S-9 block in its place.

5

☑ Firmly fix the piece with a mallet.
Check to see that the piece is level.

6

☑ The S9 blocks are used as formwork for filling the low perimeter wall.

7

☑ The coping area is now perfectly finished and ready to receive the ceramic tiles.

8

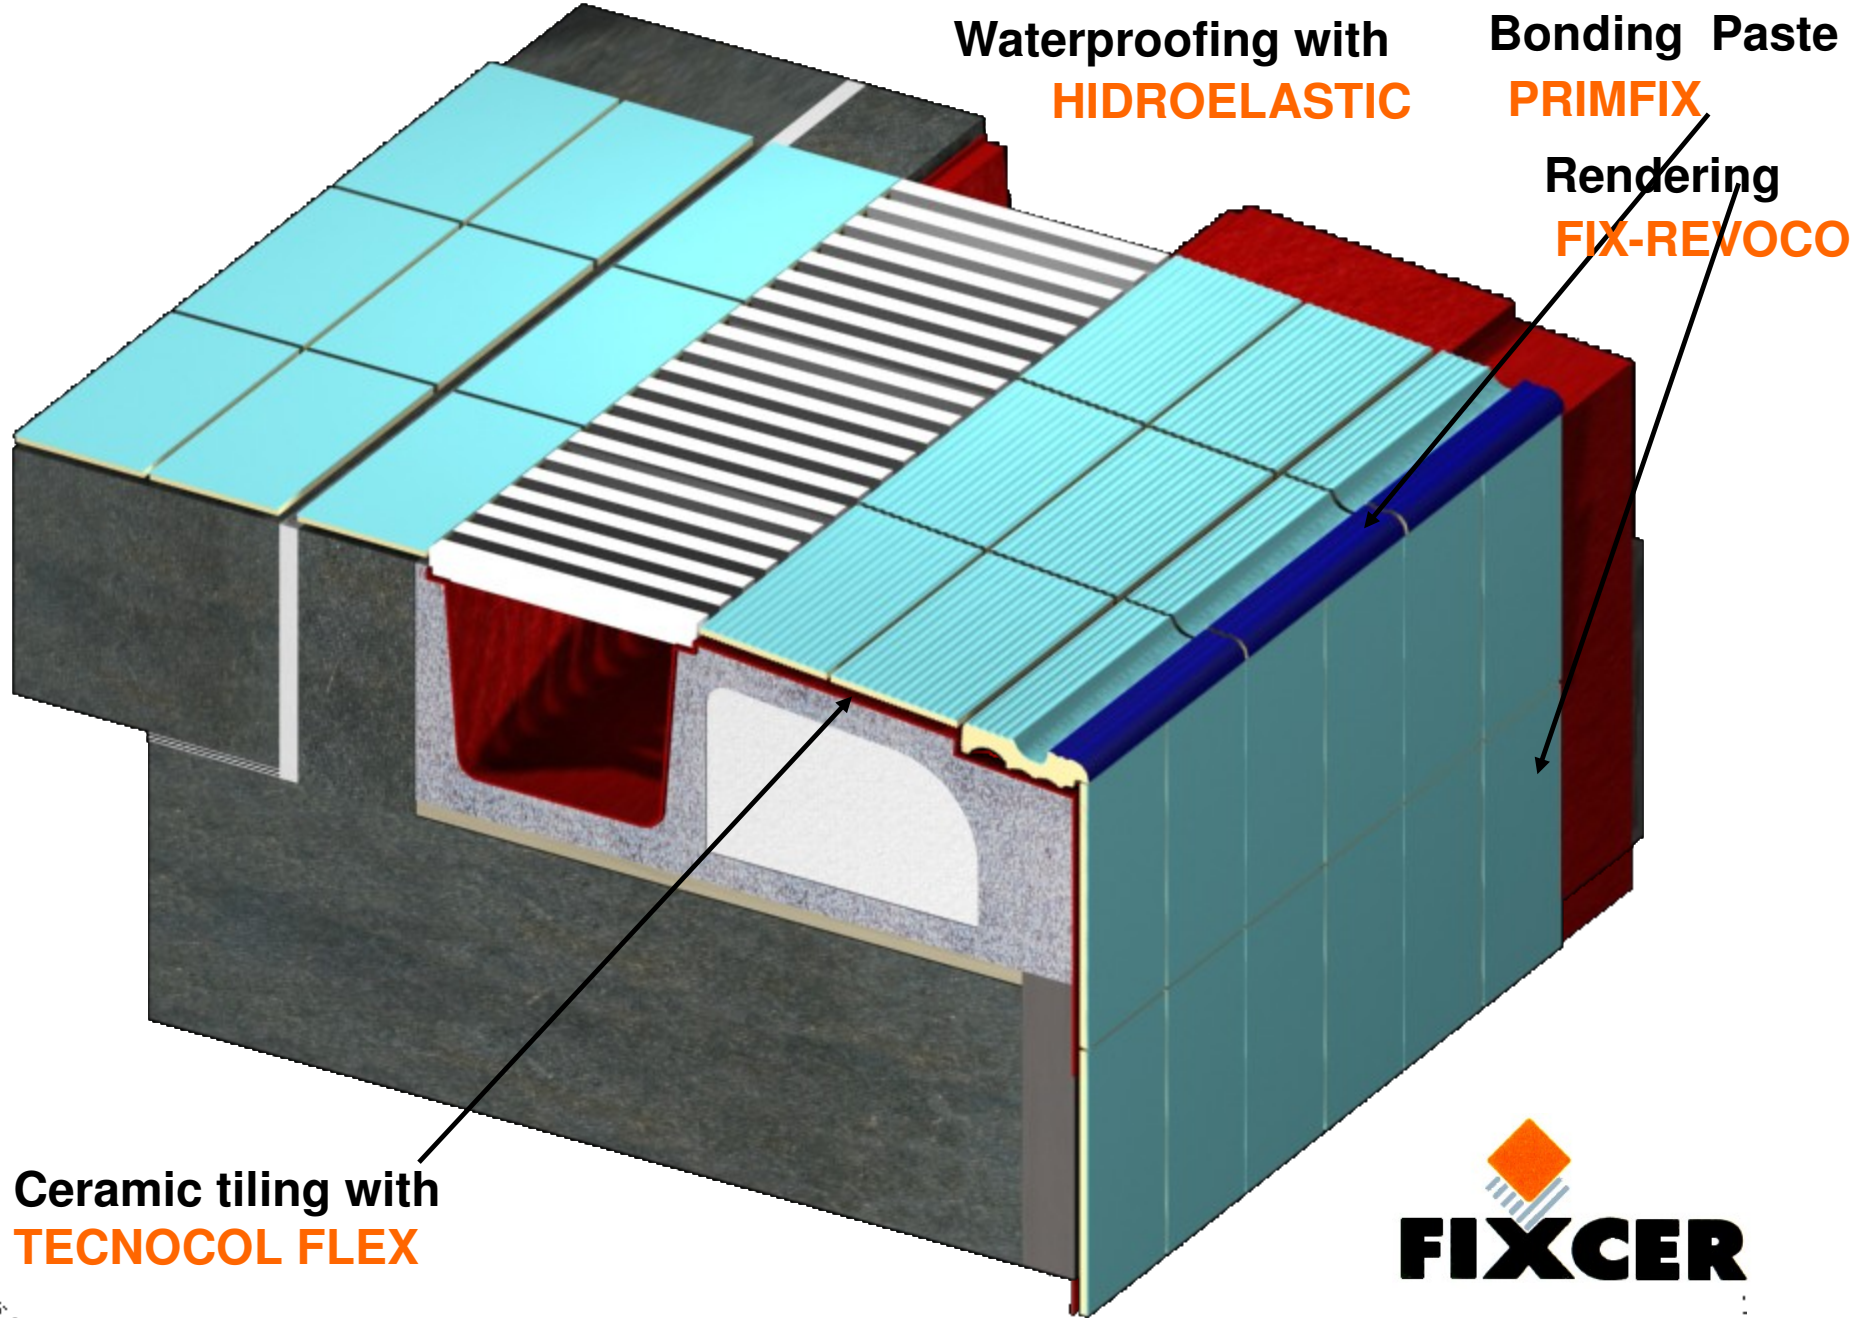

☑ Installing Rosa Gres ceramic S-9.

9

☑ Final results.
